Liverpool Student Map

Demo package · how to open it on a computer or a phone · October 2026

What's in this folder

Liverpool Student Map.html	The interactive map. Open this on a computer.
Map preview.png	A picture of the map that opens on any phone. It can't be clicked; use it to show the look.
How to open.pdf	This guide.

On a computer (Windows or Mac)

1. **Unzip the folder.** Windows: right-click the ZIP → *Extract All*. Mac: double-click the ZIP.
2. **Double-click** `Liverpool Student Map.html`**.** It opens in your usual browser (Chrome, Edge, Safari or Firefox). No sign-in or installation is needed.
3. If it opens in another app instead, right-click the file → *Open with* → choose a browser.

Internet: the map works offline. With internet, it uses the handwritten fonts; without it, text shows in a plainer font and everything else works the same.

On a phone (iPhone or Android)

Phones can't run the map straight from the ZIP. iPhone and Android only show a preview of saved web pages and don't run the code that makes the map work, so you'll see a blank or broken page. Use one of the options below instead.

Option A: the online link (simplest)

The map is also online at `https://claude.ai/artifact/V1V3BkXsqfmAo815vbRBic`. It's private, so the owner needs to share it first: open the link on a computer while signed in, then use the page's *Share* menu to add colleagues or turn on link sharing. After that, the link opens in any phone browser, and you can send it in LINE, WhatsApp or WeChat.

Option B: your own free link in two minutes

1. On a computer, unzip the folder.
2. Go to `app.netlify.com/drop`, a free hosting service.
3. Drag the unzipped folder onto the page. You get a web address straight away. Create a free account when asked, so the link keeps working.

4. Open that address on any phone. Tip: rename the HTML file to `index.html` first so the address opens the map directly.

Any web host your company already uses works the same way: upload the HTML file and open its address. For students in mainland China, use a host that loads reliably there.

Option C: just show the picture

Open `Map preview.png` in your phone's photo or files app to show what the map looks like.

Changing the language

Use the **EN / 日本語 / 中文** switch at the top left, next to the title. On a phone, the filters and the list of homes open from the **Filters** and **Homes** buttons at the bottom of the screen. To open straight into a language, add `#ja`, `#zh` or `#en` to the end of the address, for example `…/index.html#ja`.

A 2-minute demo

1. **Language:** switch to the audience's language (日本語 for Japan, 简体中文 for China).
2. **Subject:** in *I'll study*, pick *Medicine* or *Computer science*. The classes light up on campus and the houses renumber, so 1 is the closest home.
3. **Show me on the map:** zooms into the campus. Use + / − and drag to look around.
4. **Hover over or tap a house:** shows the description, walking times, prices and Amber reviews.
5. **Number homes by:** try *Cheapest en-suite* or *Most reviewed*, and watch the numbers change.
6. **Compare:** press **+** next to two or three homes in the list (or *Compare* on a house's card), then *Compare side by side*. The best walking time, price and rating in each row are marked.
7. **Ask about this home:** shows how a student contacts us on LINE, WhatsApp or WeChat, with a ready-made message naming the home.

Good to know

- Prices and reviews come from Amber and were checked on 17 October 2026. Some homes show as sold out.
- Walking times are estimates based on distance.
- The contact slots show "not added yet" until our LINE, WhatsApp and WeChat details are added.
- Japanese and Chinese texts are first drafts; a native speaker should review them before students see the map.
